

A consistent supply of quality power to your critical business systems is crucial to success in today's business environment. The right power protection solution impacts directly upon not only *System Availability* but also upon the *Return on Investment* received for your systems infrastructure. At Potencia Technologies we specialize in providing power solutions that insure the highest levels of availability, and protection of your critical loads. We work with several world leading manufacturers of UPS equipment, and offer a range of power distribution and management solutions.

The right UPS for the job is about much more than having the proper amount of system runtime. In designing and recommending a solution we will look at all the key variables necessary to insure our customers' needs are fulfilled. This will include careful consideration of:

- overall system capacity requirements
- level of protection required (i.e. high availability areas vs. intermediate level power protection needs)
- physical site requirements (system footprint, floor loading limitations, etc.)
- system scalability
- runtime requirements
- power monitoring and management, as well as related distribution requirements
- system serviceability (regular maintenance and emergency onsite requirements)

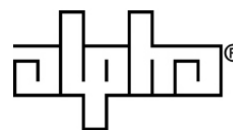

By carefully analyzing the above factors, as well as other pertinent site related information, we are able to recommend solutions that are ideally suited to the needs of our customers...whether you are looking at a centralized datacenter solution, or a rack/tower model UPS for an IT closet or workstation. These solutions will offer maximum availability, reliability, and performance for the connected loads of our customers.

Products & Services

Our product and service offerings include:

- | | |
|---|---|
| <ul style="list-style-type: none"> • Site audits of existing UPS and power • Single and three phase UPS products and generators • Static and Transfer Switches • Power monitoring and management • Power Distribution Units (cabinet and rack) | <ul style="list-style-type: none"> • Turnkey project management • UPS Batteries • Site electrical work • Standing offer pricing for government customers • Enclosures, cooling, and cabling solutions • Service contracts |
